# PIG BREEDER FEEDS

The **novatek** Pig Sow & Boar mash is fed to the boar at 2.5kg per day to keep it in a lean working condition and is not allowed to become overweight. The dry sow is fed 2.5kg per day to obtain an optimal body condition before farrowing. The guidelines for feeding the sow after breeding are given below.

<b>NOVATEK Pig Sow &amp; Boar</b> 	Description	Kg Feed / Pig
2 - 4 days after breeding	Gilts	2
	Sows	2.5
5 - 90 days after breeding	Thin Condition	3.5
	Normal Condition	2.5
	Fat Condition	2
After 90 days	Last 3 weeks	3

After farrowing the Sow is gradually introduced to **novatek Pig Lactating mash** until she is fed without restrictions (*Ad Lib*) after a week.

<b>Pig Lactating Guidelines</b>		Description	Kg Feed / Pig
<b>NOVATEK Pig Sow &amp; Boar</b> 		After delivery	6

The sow will be losing body reserves (back fat & muscle) during this stage of milk production due to not being able to consume enough feed. The sow should daily be fed 2kg for own maintenance with 0.4kg per piglet suckled.
