

**ZAMFEED**<sup>TM</sup>  
**Layer**

The **ZAMFEED Layer** feed is a quality, economy feed aimed at maintaining good egg production at the lowest cost. This feed is ideal for small-scale and backyard farmers aiming at maximizing the profits on egg production without compromising on quality. Only quality raw materials are used to make this feed.

# FEEDING GUIDELINE

<b>Zamfeed</b> Layer Feed Guidelines	<b>AGE</b> (In weeks)	<b>FEED REQUIRED</b> PER BIRD PER STAGE
<b>Zamfeed LAYER</b>	19 weeks (Start of lay) to End of lay	90g to 140g

Feed intake will vary depending on the age, season, and weight of the birds.

To maximize egg production, good management practices need to be followed.

A farmer would need to ensure the birds are not stressed, litter is well managed, birds have adequate light per day, shelter has adequate ventilation, birds have enough feeding space (or feeders), birds are not overcrowded, and that birds are properly vaccinated.

Ensure birds have access to unlimited clean water.
